Languages

Spanish (Native)

English (Fluent B2)

Rubén García García

Front-End Developer

I am a specialized front-end web developer who has learned over the years from very experienced senior colleagues on large projects and well known companies.

They always recognize my good work for cleanliness and efficiency in the code, putting me in charge of small teams with junior colleagues and moving projects from start to finish.

Passionate about learning and developing with a desire to apply skills on a larger development team.

Experience

2022 - Present

Amaris | Madrid

Front-End Developer

I started working in this company on a project for a client with colleagues from other countries. The project consisted of creating an eCommerce platform from scratch.

All this involved the creation of components in an Atomic way, calls to APIs, design of styles with Tailwind, working in a team of 4 people with constant communication with the back-end team. We work with Agile methodology, 3-week sprints and daily meetings.

2020 - 2022

NTTData | Madrid

Front-End Developer

During these years I focused on learning and improving my knowledge in different frameworks, such as Angular, React, Ionic, Bootstrap, etc... I was in a total of three projects, two with Angular and one with React.

I used tools like ReactJS, Bootstrap, NodeJS (API calls), GIT, full responsive (mobile, tablet and desktop). My task in this project was to support the team with troubleshooting, code optimization and creating some new components.

2019 - 2020

Accenture | Madrid

Front-End Developer

I was working at Accenture during my last year of university and decided to work in the Front-End development area. There I put myself into practice working with the Angular and React frameworks in a large team. I got used to the dynamics of working in a big company with daily meetings, periodic deliveries (Sprints) and use of version control (GIT and Bitbucket).

Soft Skills

- Critical thinking
- Team-player
- Creative
- Growth mindset
- Flexibility
- Consistent and independent
